

Appl. No. 09/992,240  
Amdt. dated July 20, 2004  
Reply to Office Action of April 22, 2004

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Please amend claims 1, 2, 4-8, 10, 15-17, 19 and 24 as follows:

1. (currently amended) A method of sharing consumer information between consumers via a communications network that comprises a data store accessible by a plurality of terminals each associated with a respective consumer, the method comprising:

receiving information entered into a terminal from by a providing consumer entering  
~~information~~ about a product, service or supplier ~~into their terminal~~ and uploading that information to the data store;

classifying the entered information into one of a number of predefined channels, each channel ~~relating to~~ designating a category for information that can be provided by providing consumers and useful for guiding consumer decisions relating to products, services or suppliers to which the information relates, each channel identifying a particular consumer ~~issue~~ area of interest about ~~the~~ a product, service or supplier;

storing the classified information; ~~and~~

storing a profile of a requesting consumer that identifies the channels ~~corresponding to~~  
~~consumer issues of interest to~~ associated with the requesting consumer;

Appl. No. 09/992,240  
Amdt. dated July 20, 2004  
Reply to Office Action of April 22, 2004

~~wherein (i) the receiving a request for information about the product, service or supplier entered into a terminal by a requesting consumer enters a request for information about the product, service or supplier; and into their terminal, (ii)~~

~~and in response to the request, information is downloaded~~ downloading information to the requesting consumer if that information relates to the product, service or supplier and was classified into any of the channels defined by the requesting consumer's profile.

2. (currently amended) The method of Claim 1, wherein the requesting consumer's profile is stored on a repository accessible by the network and is retrieved from storage in response to the request for information.

3. (original) The method of Claim 1, further comprising providing to the requesting consumer a list of channels defined by the requesting consumer's profile that contain information on the product, service or supplier specified by the requesting user.

4. (currently amended) The method of Claim 3, further comprising the step of receiving a choice from ~~wherein the requesting user chooses among the available channels before displaying the information on their terminal and wherein the step of downloading information includes downloading only information associated with channels chosen by the requesting user.~~

5. (currently amended) The method of Claim 1, wherein the providing consumer or ~~their~~ his or her terminal classifies the entered information into channels.

6. (currently amended) The method of Claim 5, wherein the providing consumer specifies the ~~channel(s)~~ channel or channels into which information is to be input, and inputs information into ~~the or~~ each specified channel.

Appl. No. 09/992,240  
Amdt. dated July 20, 2004  
Reply to Office Action of April 22, 2004

7. (currently amended) A method of sharing consumer information between consumers via a communications network that comprises a data store accessible by a plurality of terminals each associated with a respective consumer, the method comprising:

receiving a request for information about a product, service or supplier entered into a terminal by a requesting consumer ~~entering into their terminal a request for information about a product, service or supplier~~ and uploading that request to the network;

identifying the requesting consumer and recalling a stored profile that identifies channels corresponding to consumer ~~issues~~ areas of interest to associated with the requesting consumer, each channel designating a category for information that can be provided by providing consumers and useful for guiding consumer decisions relating to products, services and suppliers to which the information relates;

retrieving from the data store classified information about the product, service or supplier uploaded by a providing consumer to the data store; and

downloading the classified information to the requesting consumer if that information relates to the product, service or supplier and was classified into any of the channels ~~defined by a stored profile that identifies channels corresponding to consumer issues of interest to~~ associated with areas of interest of the requesting consumer.

8. (currently amended) A method of sharing consumer information between consumers via a communications network that comprises a data store accessible by a plurality of terminals each associated with a respective consumer, the method comprising:

Appl. No. 09/992,240  
Amdt. dated July 20, 2004  
Reply to Office Action of April 22, 2004

~~a providing consumer entering information~~ receiving information about a product, service or supplier entered into a terminal by a providing consumer ~~into their terminal for uploading to the data store~~ and classifying the information into channels in accordance with predefined consumer issues of potential areas of interest to a requesting consumer, each channel designating a category for information that can be provided by providing consumers and useful for guiding consumer decisions relating to products, services and suppliers to which the information relates.

9. (original) The method of Claim 8, wherein the providing user is presented with a selection of available channels in accordance with the identity of the product, service or supplier to which the information relates.

10. (currently amended) A method of sharing consumer information between consumers via a communications network that comprises a data store accessible by a plurality of terminals each associated with a respective consumer, such that a providing consumer can enter information about a product, service or supplier into a first terminal and upload that information to the data store, and a requesting consumer can enter a request for information about the product, service or supplier and download that information from the data store, ~~wherein~~ the method comprising:

storing the uploaded information classified into channels, each channel relating to a particular consumer ~~issue about~~ area of interest, each channel designating a category for information that can be provided by providing consumers and useful for guiding consumer decisions relating to products, services and suppliers to which the information relates ~~related to the product, service or supplier;~~

Appl. No. 09/992,240  
Amdt. dated July 20, 2004  
Reply to Office Action of April 22, 2004

in response to a request for information, identifying the requesting consumer and recalling a profile that identifies the channels corresponding to ~~consumer issues~~ areas of interest associated with to the requesting consumer; and

downloading the classified information to the requesting consumer if that information relates to the product, service or supplier and was classified into any of the channels defined by the profile.

11. (currently amended) The method of Claim 10, further comprising entering a unique alphanumeric identifier associated with the product, service or supplier into the providing consumer's terminal or the requesting consumer's terminal to identify the product, service or supplier that is the subject of the providing consumer's information or the requesting consumer's request.

12. (currently amended) The method of Claim 10, further comprising scanning a uniquely coded identifier associated with the product, service or supplier to identify the product, service or supplier that is the subject of the providing consumer's information or the requesting consumer's request.

13. (original) The method of Claim 10, wherein the requesting consumer bookmarks the product, service or supplier, and wherein information on the bookmarked product, service or supplier is subsequently downloaded to the requesting consumer.

14. (original) The method of Claim 10, wherein information is downloaded to a different terminal to that into which the requesting user entered the request for information.

Appl. No. 09/992,240  
Amdt. dated July 20, 2004  
Reply to Office Action of April 22, 2004

15. (currently amended) A system for sharing consumer information between consumers, the system comprising:

a communications network accessible by first and second terminals each associated with a respective consumer, such that a providing consumer can enter information about a product, service or supplier into a first terminal and upload that information to the network;

means for classifying the entered information into one of a plurality of predefined channels, each channel relating to a particular consumer area of interest, each channel designating a category for information that can be provided by providing consumers and useful for guiding consumer decisions relating to selection of products, services and suppliers to which the information relates ~~issue about the product, service or supplier;~~

a data store ~~being part of the network~~ for storing the classified information;

a second terminal for the requesting consumer to enter a request for information about the product, service or supplier;

means responsive to the request to recognize the requesting consumer and to recall a profile that identifies the channels corresponding to consumer ~~issues of interest to~~ areas of interest of the requesting consumer; and

a filter responsive to the requesting consumer's profile, the filter being set to permit download of information to the requesting consumer only if that information relates to the product, service or supplier and was classified into any of the channels defined by the requesting consumer's profile.

Appl. No. 09/992,240  
Amdt. dated July 20, 2004  
Reply to Office Action of April 22, 2004

16. (currently amended) A system for sharing consumer information between consumers, the system comprising:

a terminal usable by a requesting consumer to request information about a product, service or supplier, to upload that request to a communications network and to download the requested information from the communications network;

means responsive to the request to recognize the requesting consumer and to retrieve from a data store classified information about the product, service or supplier uploaded by a providing consumer to the data store; and

a filter responsive to a stored profile that identifies channels corresponding to consumer ~~issues~~ areas of interest to the requesting consumer, each channel designating a category for information that can be provided by providing consumers and useful for guiding consumer decisions relating to products, services and suppliers to which the information relates, the filter being set to permit download of information to the requesting consumer if that information relates to the product, service or supplier and was classified into any of the channels defined by the requesting consumer's profile.

17. (currently amended) A system for sharing consumer information between consumers, the system comprising:

a terminal usable by a providing consumer to enter information about a product, service or supplier for uploading to a communications network; and

means for classifying the information into one of a plurality of predefined channels, each channel identifying an area of potential area to a requesting consumer, each channel designating a

Appl. No. 09/992,240  
Amdt. dated July 20, 2004  
Reply to Office Action of April 22, 2004

category for information that can be provided by providing consumers and useful for guiding consumer decisions relating to products, services and suppliers to which the information relates-  
~~in accordance with consumer issues of potential areas of interest to a requesting consumer.~~

18. (original) The system of Claim 17, further comprising means responsive to the identity of the product, service or supplier to present the providing user with a selection of available channels in accordance with the product, service or supplier to which the information relates.

19. (currently amended) A communications system for sharing consumer information between consumers, the system being accessible by first and second terminals each associated with a respective consumer, such that a providing consumer can enter information about a product, service or supplier into a first terminal and upload that information to the system, and a requesting consumer can enter a request for information about said product, service or supplier and download that information from the system, the system comprising:

a data store for storing the uploaded information, the stored information being classified into channels, each channel relating to a particular consumer issue area of interest, each channel designating a category for information that can be provided by providing consumers and consumer decisions relating to products, services and suppliers to which the information relates-  
~~about the product, service or supplier;~~

means responsive to a request for information to recognize the requesting consumer and to recall a profile that identifies the channels corresponding to consumer issues of interest to the requesting consumer; and

Appl. No. 09/992,240  
Amdt. dated July 20, 2004  
Reply to Office Action of April 22, 2004

a filter responsive to the requesting consumer's profile, the filter being set to permit download of information to the requesting consumer if that information relates to the product, service or supplier and was classified into any of the channels defined by the requesting consumer's profile.

20. (original) The system of Claim 19, further comprising means for storing the requesting consumer's profile and retrieving the requesting consumer's profile from storage in response to the request for information.

21. (currently amended) The system of Claim 19, comprising means for entering a unique alphanumeric identifier associated with the product, service or supplier into the providing consumer's terminal or the requesting consumer's terminal to identify the product, service or supplier that is the subject of the providing consumer's information or the requesting consumer's request.

22. (original) The system of Claim 19, further comprising scanner means for scanning a uniquely coded identifier associated with the product, service or supplier to identify the product, service or supplier the subject of the providing consumer's information or the requesting consumer's request.

23. (currently amended) The system of Claim 22, wherein the uniquely coded identifier comprises a barcode or a radiofrequency (RF) RF tag.

24. (currently amended) A terminal programmed to enable a providing consumer and a requesting consumer to share consumer information, the terminal comprising:

Appl. No. 09/992,240  
Amdt. dated July 20, 2004  
Reply to Office Action of April 22, 2004

means for enabling the providing consumer to enter information about a product, service or supplier for uploading to a communications network; and

means for classifying the information into one of a plurality of predefined channels, each channel identifying an area of potential area to a requesting consumer, each channel designating a category for information that can be provided by providing consumers and useful for guiding consumer decisions relating to products, services and suppliers to which the information relates-  
~~in accordance with consumer issues of potential interest to the requesting consumer.~~
